

# SalesForce Account Setup

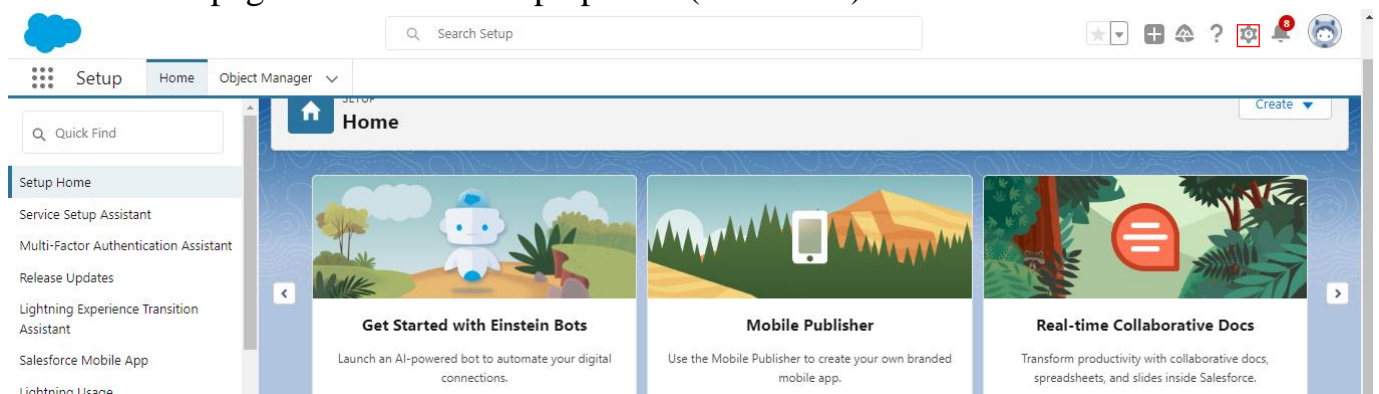

1. Go to <https://developer.salesforce.com/signup>
2. Enter all your credentials. Put username same as email ID, role as developer and any bogus company name.

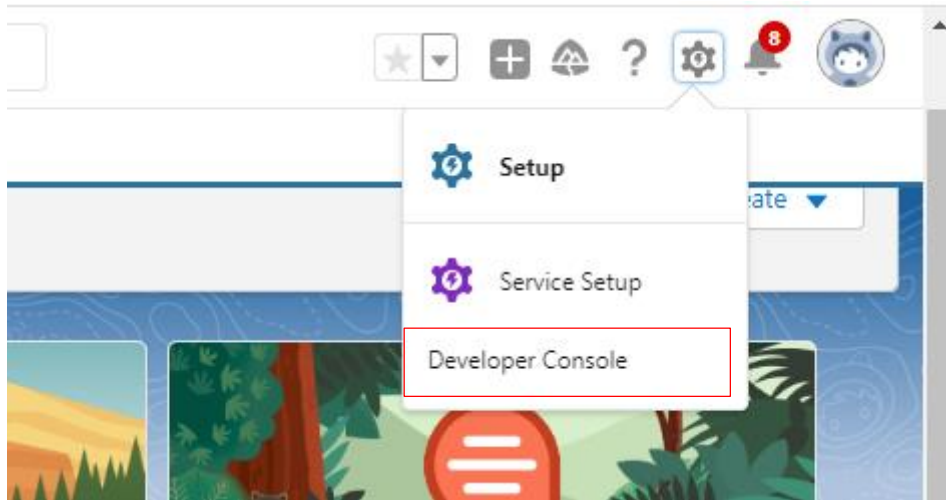

3. After that click on signup and wait for the email for about 5 to 10 minutes.
4. Once you receive the email, open it and verify your account by setting up the password and secret question.
5. After setting it up you will get the home page as follows:

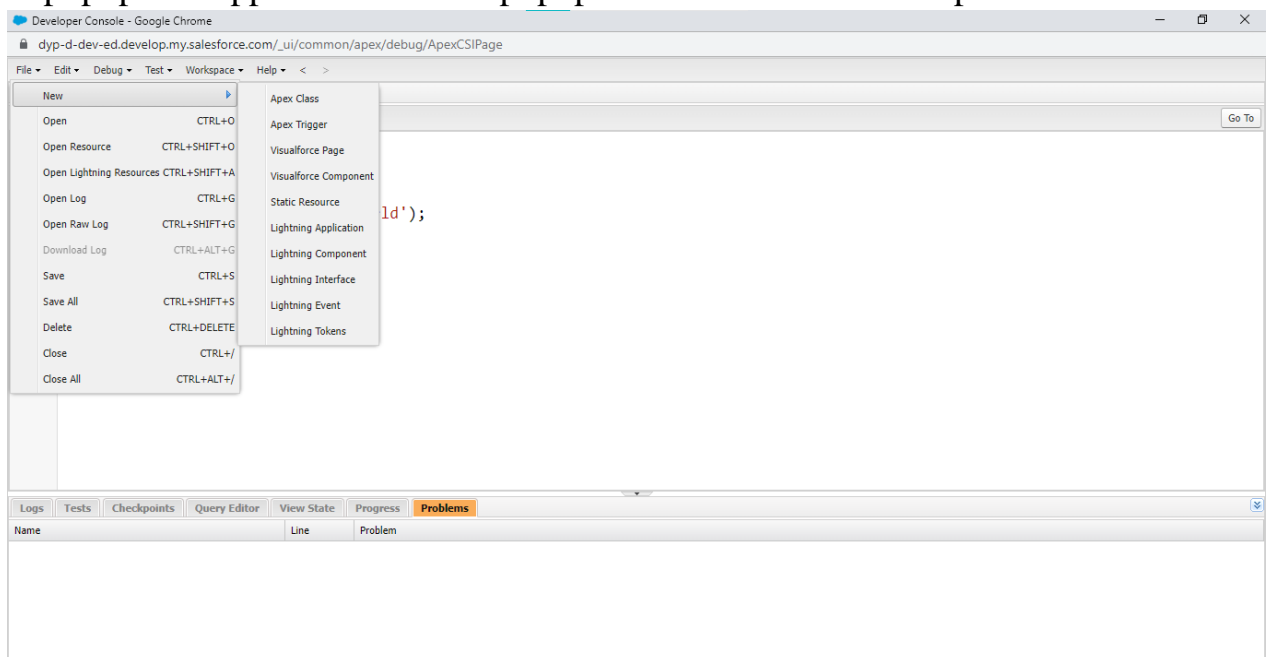

6. On the home page click on the setup option : (in red box)

7. Click on developer console

8. A popup will appear then in that popup click on File->New->Apex Class

9. Give an appropriate class name and click OK

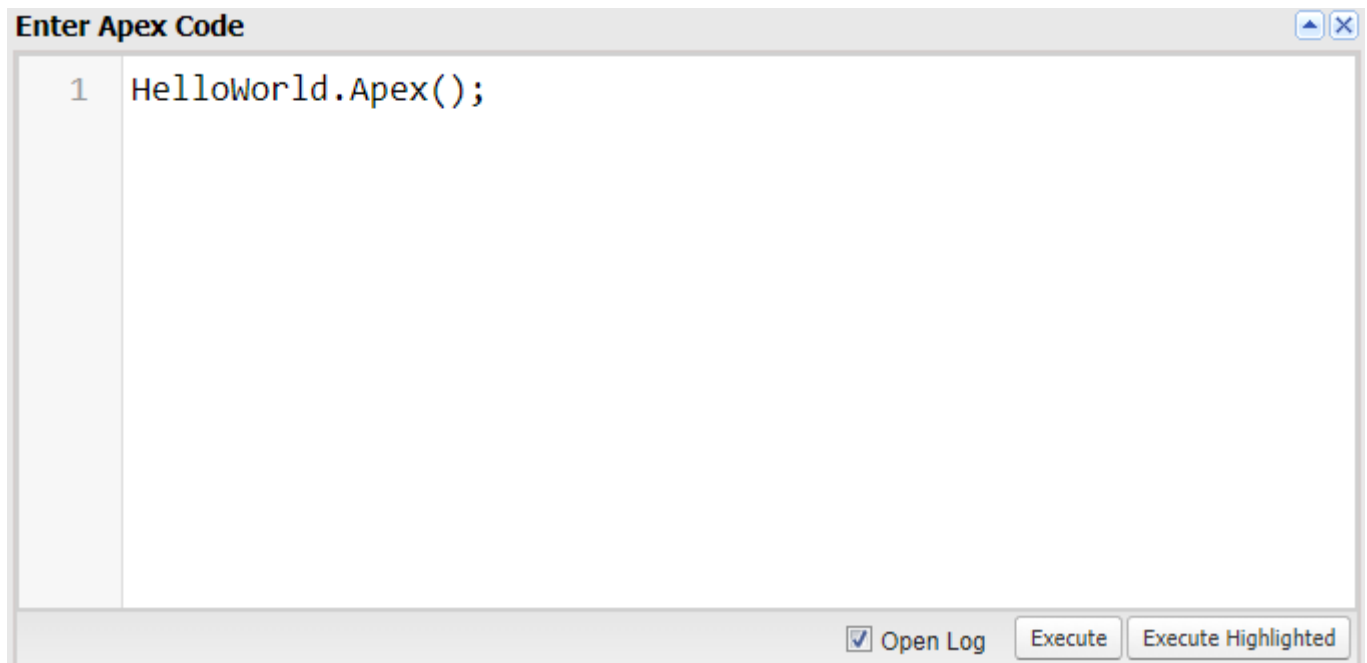

10. Type the following code:

```
public class HelloWorld {  
    public static void Apex()  
    {  
        system.debug('Hello World');  
    }  
}
```

11. After typing that, do ctrl+S to save which will compile the code as well.

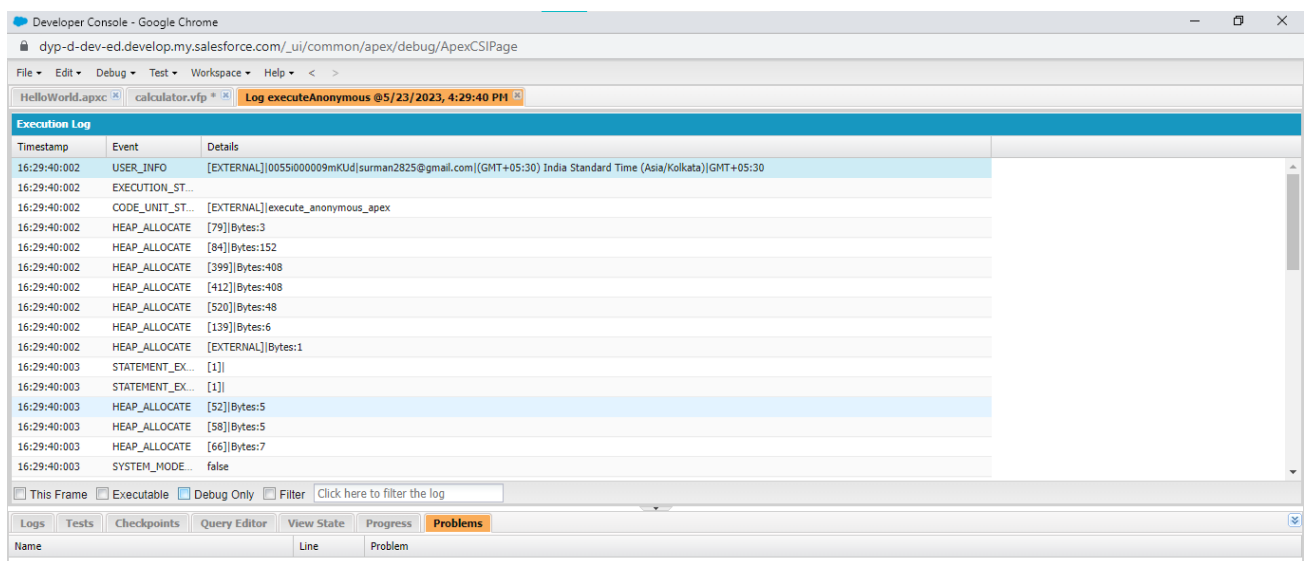

12. Then go to Debug -> Open Execute Anonymous window and type the code in that window

```
HelloWorld.Apex();
```

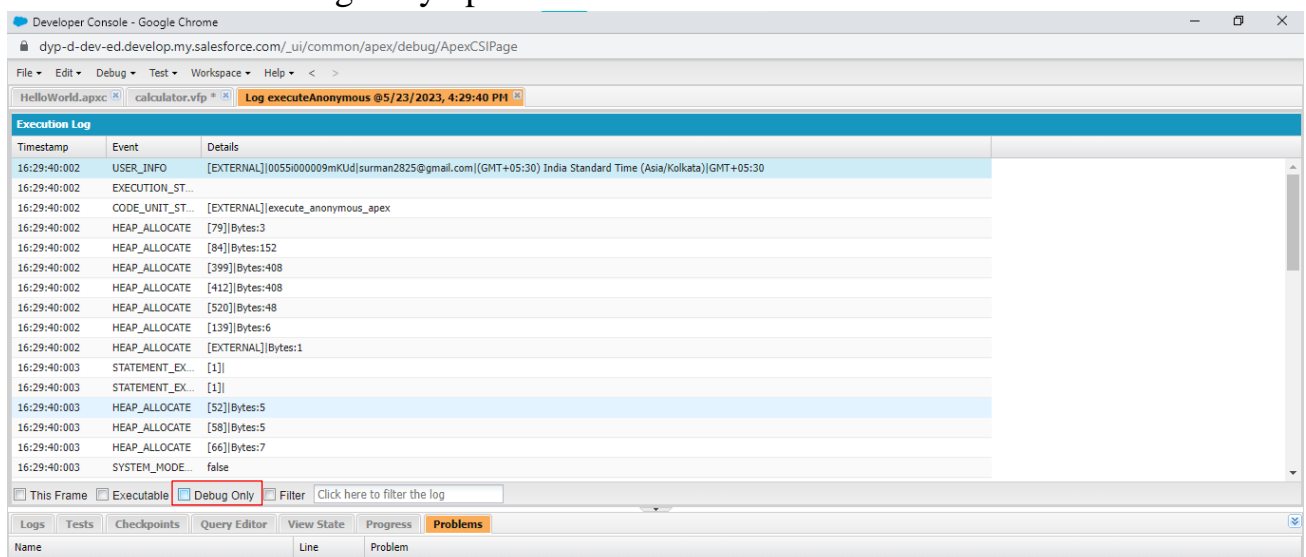

Also check the Open Log option at the bottom. Then click execute.

13. A new window will appear as follows

14. Then check the Debug Only option

On checking it, you will the output hello world.
